Footnotes

[1] Data beginning with year noted are not comparable with prior years.

[2] Area included in Chicago—Gary Standard Consolidated Statistical Area.

[3] Adjusted to March 1980 benchmark levels.

[4] Subarea of Baltimore Standard Metropolitan Statistical Area.

[5] Hours and earnings based on March 1980 benchmark.

[6] Subarea of Philadelphia Standard Metropolitan Statistical Area.

[7] Subarea of Rochester Standard Metropolitan Statistical Area.

[8] Area included in New York and Nassau—Suffolk combined Standard Metropolitan Statistical Area.

[9] Subarea of New York Standard Metropolitan Statistical Area.

[10] Subarea of Northeast Pennsylvania Standard Metropolitan Statistical Area.

[11] Subarea of Washington, D.C. Standard Metropolitan Statistical Area.

NOTE: Miscellaneous manufacturing (SIC 39) is included in nondurable goods in State and area data for the following: Maine, Massachusetts, Rhode Island, Vermont, and New York. All other States and areas include this industry in durable goods.

Appendix A. Area Definitions

ALABAMA

Birmingham	Jefferson, St. Clair, Shelby, and Walker Counties
Huntsville	Limestone, Madison, and Marshall Counties
Mobile	Baldwin and Mobile Counties
Montgomery	Autauga, Elmore, and Montgomery Counties
Tuscaloosa	Tuscaloosa County

ARIZONA

Phoenix	Maricopa County
Tucson	Pima County

ARKANSAS

Fayetteville—Springdale	Benton and Washington Counties
Fort Smith	Crawford and Sebastian Counties, Ark.; LeFlore and Sequoyah Counties, Okla.
Little Rock—N. Little Rock	Pulaski and Saline Counties
Pine Bluff	Jefferson County

CALIFORNIA

Anaheim—Santa Ana—Garden Grove	Orange County
Bakersfield	Kern County
Fresno	Fresno County
Los Angeles—Long Beach	Los Angeles County
Modesto	Stanislaus County
Oxnard—Simi Valley—Ventura	Ventura County
Riverside—San Bernardino—Ontario	Riverside and San Bernardino Counties
Sacramento	Placer, Sacramento, and Yolo Counties
Salinas—Seaside—Monterey	Monterey County
San Diego	San Diego County
San Francisco—Oakland	Alameda, Contra Costa, Marin, San Francisco, and San Mateo Counties
San Jose	Santa Clara County
Santa Barbara—Santa Maria—Lompoc	Santa Barbara County
Santa Rosa	Sonoma County
Stockton	San Joaquin County
Vallejo—Fairfield—Napa	Napa and Solano Counties

COLORADO

Denver—Boulder	Adams, Arapahoe, Boulder, Clear Creek, Denver, Douglas, Gilpin, and Jefferson Counties

CONNECTICUT

Bridgeport	Bridgeport and Shelton cities, and Easton, Fairfield, Monroe, Stratford, and Trumbull towns in Fairfield County; Derby and Milford cities in New Haven County
Hartford	Hartford city, and Avon, Bloomfield, Canton, East Granby, East Hartford, East Windsor, Enfield, Farmington, Glastonbury, Granby, Manchester, Marlborough, Newington, Rocky Hill, Simsbury, South Windsor, Suffield, West Hartford, Wethersfield, Windsor, and Windsor Locks towns in Hartford County; Colchester town in New London County; Andover, Bolton, Columbia, Coventry, Ellington, Hebron, Somers, Stafford, Tolland, Vernon, and Willington towns in Tolland County
New Britain	New Britain city, and Berlin, Plainville, and Southington towns in Hartford County

Area Definitions—Continued

CONNECTICUT—Continued	
New Haven—West Haven	New Haven and West Haven cities, and Bethany, Branford, East Haven, Guilford, Hamden, Madison, North Branford, North Haven, Orange, Wallingford, and Woodbridge towns in New Haven County; Clinton town in Middlesex County
Stamford	Stamford city, and Darien, Greenwich, and New Canaan towns in Fairfield County
Waterbury	Waterbury city, Naugatuck borough, and Beacon Falls, Cheshire, Middlebury, Prospect, Southbury, and Wolcott towns in New Haven County; Bethlehem, Thomaston, Watertown, and Woodbury towns in Litchfield County
DELAWARE	
Wilmington	New Castle County, Del.; Cecil County, Md.; Salem County, N.J.
DISTRICT OF COLUMBIA	
Washington SMSA	District of Columbia; Charles, Montgomery, and Prince Georges Counties, Md.; Alexandria, Fairfax, Falls Church, Manassas, and Manassas Park cities, and Arlington, Fairfax, Loudoun, and Prince William Counties, Va.
FLORIDA	
Bradenton	Manatee County
Daytona Beach	Volusia County
Fort Lauderdale—Hollywood	Broward County
Fort Myers—Cape Coral	Lee County
Gainesville	Alachua County
Jacksonville	Baker, Clay, Duval, Nassau, and St. Johns Counties
FLORIDA—Continued	
Lakeland—Winter Haven	Polk County
Melbourne—Titusville—Cocoa	Brevard County
Miami	Dade County
Orlando	Orange, Osceola, and Seminole Counties
Panama City	Bay County
Pensacola	Escambia and Santa Rosa Counties
Sarasota	Sarasota County
Tallahassee	Leon and Wakulla Counties
Tampa—St. Petersburg	Hillsborough, Pasco, and Pinellas Counties
West Palm Beach—Boca Raton	Palm Beach County
GEORGIA	
Albany	Dougherty and Lee Counties
Atlanta	Butts, Cherokee, Clayton, Cobb, De Kalb, Douglas, Fayette, Forsyth, Fulton, Gwinnett, Henry, Newton, Paulding, Rockdale, and Walton Counties
Augusta	Columbia and Richmond Counties, Ga.; Aiken County, S.C.
Columbus	Columbus (consolidated government), and Chattahoochee County, Ga.; Russell County, Ala.
Macon	Bibb, Houston, Jones, and Twiggs Counties
Savannah	Bryan, Chatham, and Effingham Counties
HAWAII	
Honolulu	Honolulu County
IDAHO	
Boise City	Ada County
ILLINOIS	
Bloomington—Normal	McLean County
Champaign—Urbana—Rantoul	Champaign County

Area Definitions—Continued

ILLINOIS—Continued	
Chicago SMSA	Cook, Du Page, Kane, Lake, McHenry, and Will Counties
Davenport—Rock Island—Moline	Henry and Rock Island Counties, Ill.; Scott County, Iowa
Decatur	Macon County
Kankakee	Kankakee County
Peoria	Peoria, Tazewell, and Woodford Counties
Rockford	Boone and Winnebago Counties
Springfield	Menard and Sangamon Counties
INDIANA	
Anderson	Madison County
Elkhart	Elkhart County
Evansville	Gibson, Posey, Vanderburgh, and Warrick Counties, Ind.; Henderson County, Ky.
Fort Wayne	Adams, Allen, De Kalb, and Wells Counties
Gary—Hammond—East Chicago	Lake and Porter Counties
Indianapolis	Boone, Hamilton, Hancock, Hendricks, Johnson, Marion, Morgan, and Shelby Counties
Lafayette—West Lafayette	Tippecanoe County
Muncie	Delaware County
South Bend	Marshall and St. Joseph Counties
Terre Haute	Clay, Sullivan, Vermillion, and Vigo Counties
IOWA	
Cedar Rapids	Linn County
Des Moines	Polk and Warren Counties
Dubuque	Dubuque County
Sioux City	Woodbury County, Iowa; Dakota County, Neb.
Waterloo—Cedar Falls	Black Hawk County
KANSAS	
Lawrence	Douglas County
Topeka	Jefferson, Osage, and Shawnee Counties
KANSAS—Continued	
Wichita	Butler and Sedgwick Counties
KENTUCKY	
Lexington—Fayette	Bourbon, Clark, Fayette, Jessamine, Scott, and Woodford Counties
Louisville	Bullitt, Jefferson, and Oldham Counties, Ky.; Clark and Floyd Counties, Ind.
Owensboro	Daviess County
LOUISANA	
Alexandria	Avoyelles, Grant, and Rapides Parishes
Baton Rouge	Ascension, East Baton Rouge, Livingston, and West Baton Rouge Parishes
Lafayette	Lafayette Parish
Lake Charles	Calcasieu Parish
Monroe	Ouachita Parish

Racine	Racine County
WYOMING	
Casper	Natrona County
Cheyenne	Laramie County

Appendix B. Explanatory Notes

Measuring Employment, Hours, and Earnings in States and Areas

The Current Employment Statistics Program is an integrated Federal-State undertaking designed to produce estimates of nonfarm employment, hours, and earnings at the national, State, and area levels. It is conducted jointly by State employment security agencies, the Bureau of Labor Statistics, and the Employment and Training Administration in the 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands. Estimates are prepared and published monthly for each State and for major areas.

Collection

Federal-State cooperation. Under cooperative arrangements between State agencies and BLS, the respondent fills out only one reporting form, which is used for national, State, and area estimates. This procedure eliminates duplicate reporting on the part of respondents, and together with the use of similar estimating techniques at the national and State levels, promotes geographic comparability of estimates.

State agencies mail the forms to the establishments and examine the returns for consistency, accuracy, and completeness. After the States use the information to prepare State and area series, the source materials are sent to BLS (Washington Office) for use in developing estimates at the national level.

Shuttle schedules. Form BLS 790—"Report on Employment, Payroll, and Hours"—is used to collect employment, payroll, and hours data. The schedule is returned to the respondent each month by the State agency so that the next month's data can be entered on the space allotted for that month. This "shuttle" procedure promotes comparability and accuracy of reporting, since the respondents can see the figures they have reported for previous months.

The BLS 790 provides for entry of data on the number of full- and part-time workers on the payrolls of nonagricultural establishments, and, for most industries, payroll and hours of production and related workers, construction workers, or nonsupervisory workers.

Concepts

Industrial classification. Establishments are classified into industries on the basis of their principal product or activity, in accordance with the **Standard Industrial Classification Manual, 1972**. Since January 1980, the classification is determined from information on annual sales volume collected each year on a supplement to the quarterly unemployment insurance tax reports filed by employers. If an establishment makes more than one product or engages in more than one activity, the entire employment of the establishment is included under the industry indicated by the principal product or activity.

Industry employment. Employment data, except for the Department of Defense, refer to persons on establishment payrolls who received pay for any part of the pay period which includes the 12th of the month. For civilian employees of the Department of Defense, the figures represent the number of persons who occupied positions on the last day of the calendar month; intermittent workers are counted if they performed any service during the month.

The data exclude proprietors, the self-employed, unpaid family workers, farm workers, and domestic workers in households. Salaried officers of corporations are included. Government employment covers only civilian employees; Federal military personnel are excluded from the estimates of total nonagricultural employment.

Persons on an establishment payroll who are on paid sick leave (when pay is received directly from the firm), on paid holiday or paid vacation, or who work during any part of the pay period even though they are unemployed or on strike during the rest of the period, are counted as employed. Not counted as employed are persons who are laid off, on leave without pay or on strike for the entire period, or who are hired but do not report to work during the period.

Industry hours and earnings. Hours and earnings data are derived from reports of payroll and hours for production and related workers in mining and manufacturing, construction workers in construc-

tion, and nonsupervisory employees in all other industries. When the reported pay period exceeds 1 week, the payroll and hours figures are reduced to a weekly basis. The above items are further defined as follows:

Production and related workers include working supervisors and all nonsupervisory workers (including group leaders and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial and guard services, product development, auxiliary production for plant's own use (e.g., power plant), and record-keeping and other services closely associated with the above production operations.

Construction workers include the following employees in the construction division: Working supervisors, qualified craft workers, mechanics, apprentices, laborers, etc., whether working at the site of construction or in shops or yards, at jobs (such as precutting and preassembling) ordinarily performed by members of the construction trades.

Nonsupervisory employees include employees (not above the working supervisory level) such as office and clerical workers, repairers, salespersons, operators, drivers, physicians, lawyers, accountants, nurses, social workers, research aides, teachers, drafters, photographers, beauticians, musicians, restaurant workers, custodial workers, attendants, line installers and repairers, laborers, janitors, guards, and other employees whose services are closely associated with those of the employees listed.

Payroll covers the payroll for full- and part-time production, construction, or nonsupervisory workers who received pay for any part of the pay period which includes the 12th of the month. The payroll is reported before deductions of any kind, e.g., for old-age and unemployment insurance, group insurance, withholding tax, bonds, or union dues; also included is pay for overtime, holidays, vacations, and sick leave paid directly by the firms. Bonuses (unless earned and paid regularly each pay period), other pay not earned in pay period reported (e.g., retroactive pay), and the value of free rent, fuel, meals, or other payment in kind are excluded.

Hours cover hours worked or paid for during the pay period which includes the 12th of the month, for production, construction, or nonsupervisory workers. Hours include hours paid for holidays and vacations, and for sick leave when pay is received directly from the firm.

Average hourly and weekly earnings. Average hourly earnings for manufacturing and nonmanufacturing industries are on a "gross" basis, reflecting not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work, and changes in output of workers paid on an incentive plan. Shifts in total volume of employment between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general earnings averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Averages of hourly earnings differ from wage rates. Earnings are the actual return to the worker, while rates are the amounts stipulated for a given unit of work or time. The earnings series do not measure the level of total labor cost to the employer since the following are excluded: Irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings by employees not covered under the production worker, or construction worker, or nonsupervisory employee definitions.

Gross average weekly earnings in most cases are derived by multiplying average weekly hours by average hourly earnings. Therefore, weekly earnings are affected not only by changes in gross average hourly earnings, but also by changes in the length of the workweek, part-time work, work stoppages for varying reasons, labor turnover, and absenteeism.

Average weekly hours. The workweek information relates to the average hours for which pay was received, and differs from standard or scheduled hours. Such factors as absenteeism, labor turnover, part-time work, and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishment. Group averages further reflect differences in the workweek of component industries.

Estimating methods

Employment. The principal features of the procedure used to estimate employment for the industry statistics are (1) the use of the "link relative" technique, which is a form of ratio estimation, and (2) periodic adjustment of estimated employment levels to new benchmarks.

The "link relative" technique. From a sample of establishments which reported for both the previous and current months, the ratio of current-month employment to that of the previous month is com-

puted. The estimates of employment (all employees, including both production and nonproduction workers) for the current month are obtained by multiplying the estimates for the previous month by these "link relatives."

At the aggregate industry level, i.e., divisions and groups, employment is the sum of the employment estimates for component industries. Annual average employment is the sum of the monthly estimates divided by 12.

Benchmark adjustment. Each year employment estimates are compared with comprehensive counts of employment, which provide "benchmarks" for the various nonagricultural industries, and appropriate adjustments are made. Normally, benchmark adjustments are made annually.

The primary source of benchmark information is the employment data, by industry, compiled quarterly by State agencies from reports of establishments covered under State unemployment insurance laws. These reports, covering about 98 percent of employees on nonagricultural payrolls in the United States, are collected and tabulated by State employment security agencies under the direction of BLS. Benchmark data for the residual are obtained from the records of the Social Security Administration, the Interstate Commerce Commission, and a number of other agencies in private industry or government.

The estimates for the benchmark month are compared with the new benchmark levels, industry by industry. If revisions are necessary, the monthly series of estimates between benchmark periods are adjusted at levels between the new benchmark and the preceding one, and the new benchmark for each industry is then carried forward progressively to the current month on the basis of trends shown in the sample. Under this procedure, the benchmark is used to establish the level of employment while the sample is used to measure the month-to-month changes in the level.

Data for the periods subsequent to the last benchmark are subject to revision.

Hours and earnings. These estimates are based on the same sample used for the employment estimates. The average weekly hours and average hourly and weekly earnings apply only to production, construction, or nonsupervisory workers as distinguished from all employees.

For individual industries, monthly estimates of average weekly hours are obtained by dividing aggregate (total) hours by the number of production workers (or construction, or nonsupervisory workers). Average hourly earnings are computed by dividing aggregate payrolls by aggregate hours. Industry group and division averages are obtained by weighting the averages for individual industries by production-worker employment (in the case of average weekly hours) or production-worker hour aggregates (in the case of average hourly earnings) in the particular groups or divisions.

To obtain annual averages of average weekly hours, the 12-month total of aggregate hours (average weekly hours multiplied by production-worker employment) is divided by the 12-month total of employment. The 12-month total of aggregate payrolls (weekly earnings multiplied by employment weights or hourly earnings multiplied by aggregate hours for 12 months) is divided by the 12-month total of aggregate hours to yield average hourly earnings.

Average weekly earnings, except for industries where hours data are not collected, are the product of average weekly hours and average hourly earnings.

The sample

Design. The sampling plan used in the survey is an optimum allocation design known as "sampling proportionate to average size of establishment." Under this design, large establishments fall into the sample with certainty. However, the proportion of total employment covered varies considerably from industry to industry. For example, sample coverage is high (55 percent on the average) in manufacturing industries in which a large proportion of total employment is concentrated in relatively few establishments. On the other hand, coverage is much lower (17 percent) in wholesale and retail trade industries which are made up of many small establishments. The large sample in manufacturing is desirable because manufacturing industries have a greater tendency to vary from regular cyclical or seasonal patterns than do nonmanufacturing industries.

Reliability of the employment estimates. The estimates derived from the employment and payroll survey may differ from the figures that would have been obtained if it were possible to take a complete census using the same schedules and procedures. However, the relatively large size of the samples maintained by the State agencies and the annual adjustment of employment estimates to more recent benchmark levels assure a very high degree of accuracy. One measure of the reliability of an estimate projected from a benchmark is the amount by which it differs from the new benchmark at the next adjustment period. BLS uses this criterion rather than the

standard error of the estimates. Average benchmark revisions to State and area estimates for recent years are presented in table 1. Table 2 indicates the distribution of States and areas by percentage differences between benchmarks and estimates since 1978.

Differences between the benchmarks and the estimates result not only from sampling and response errors but also from changes in the industrial classification of individual establishments (resulting from changes in their product), which are not reflected in the estimate levels until the data are adjusted to new benchmarks. At the more detailed industry levels, particularly within manufacturing, changes in classification are often the major cause of differences. Another cause of differences, generally minor, between the estimates and the benchmarks is improvement in the quality of the benchmark data.

Table 1. Percentage differences between State and area benchmarks and estimates for employment, by industry division 1978-1981

Industry division	1978		1979		1980		1981	
	State	Area	State	Area	State	Area	State	Area
Total	1.6	1.5	0.9	1.8	0.0	0.4	0.1	0.5
Mining	5.7	9.2	.3	7.8	3.0	4.7	3.0	8.5
Contract construction	2.2	2.3	1.5	8.3	1.4	1.0	.1	.1
Manufacturing	.9	1.0	1.0	2.4	.2	.1	.3	.4
Transportation and public utilities	1.6	1.2	.7	3.7	.2	.2	.2	.2
Wholesale and retail trade	1.7	1.4	1.0	2.9	.7	.4	.2	.6
Finance, insurance, and real estate	1.8	1.1	.6	3.4	.8	.9	.6	2.0
Services	2.4	2.7	.9	3.6	.3	.7	.3	1.5
Government	1.1	1.1	.9	3.1	.3	.5	0.0	.3

Comparability with other series

County Business Patterns. Data in this publication (Bureau of the Census, U.S. Department of Commerce) differ from BLS establishment statistics in the treatment of central administrative offices and auxiliary units. Differences also may arise because of industrial classification, and reporting practices. In addition, CBP coverage is incomplete for some nonprofit activities, and interstate railroads and government are excluded.

Employment covered by State unemployment insurance programs. Most nonagricultural wage and salary workers are covered by unemployment insurance programs. Beginning in January 1972, coverage was expanded to include employees of small firms and selected nonprofit organizations who had not been covered previously. However, certain activities, such as interstate railroads, parochial schools, and churches are not covered by unemployment insurance programs whereas these are included in BLS establishment statistics. Beginning in January 1978, coverage was extended to include almost all State and local government employees.

Statistics on manufactures and business, Bureau of the Census. BLS establishment statistics on employment differ from employment counts derived by the Bureau of the Census from its censuses or annual sample surveys of manufacturing establishments and the censuses of business establishments. The major reasons for noncomparability are different treatment of business units considered parts of an establishment, such as central administrative offices and auxiliary units, the industrial classification of establishments, and different reporting patterns of multiunit companies. There are also differences in the scope of the industries covered, e.g., the Census of Business excludes professional services, public utilities, and financial establishments, whereas these are included in BLS statistics.

Statistics on State and local government, Bureau of the Census. BLS statistics on State and local government employment differ slightly from the employment counts of the Bureau of the Census in its censuses and annual sample surveys. BLS excludes and Census includes certain nominal employment (such as paid elected officials of small cities) and Federal-State cooperative extension personnel serving under a Federal appointment. BLS classifies employees of local government libraries in "education" whereas Census includes them under "other local functions."

Table 2. Distribution of States and areas by percentage difference between benchmarks and estimates for total nonagricultural employment, 1978-81

Percent difference	1978		1979		1980		1981	
	State	Area	State	Area	State	Area	State	Area
Total	51	234	51	234	50	238	50	248
Less than 0.5 percent	14	51	15	43	20	46	18	57
0.5 to 0.9 percent	5	30	6	39	13	58	10	60
1.0 to 1.9 percent	15	39	15	69	12	64	18	73
2.0 to 2.9 percent	9	47	9	38	3	41	2	29
3.0 to 3.9 percent	5	24	5	23	0	10	1	17
4.0 to 4.9 percent	2	25	1	9	1	6	1	4
5.0 percent and over	1	18	0	13	1	13	0	8

Federal Civilian Work Force Statistics bulletin, Office of Personnel Management. The Office of Personnel Management (OPM), publishes this bulletin monthly using data from reports it collects. The BLS Federal employment series by State are derived from statistics based on coverage of unemployment compensation for Federal employees. OPM data exclude and BLS data include Defense Department workers paid from nonappropriated funds, employees of certain local agricultural committees of the Department of Agriculture, and Federal-State cooperative employees serving under a Federal appointment. OPM data include and BLS data exclude employees paid on a contract or fee basis, and certain interns, student nurses, and other student employees of Federal hospitals. BLS employment (except for Defense Department units) is for the pay period including the 12th of the month whereas the OPM count represents the number of persons employed on the last workday of the month plus all intermittent employees during the month.

Productivity and the Economy: A Chartbook

***Productivity.* Everybody talks about it.**
What does it mean?
How does it affect wages and costs?
What does it have to do with employment?

This new chartbook, produced by the staff of the Bureau of Labor Statistics, answers questions in understandable—yet technically accurate—charts and captions.

The chartbook explains what productivity is, how it has changed over the years, and what factors have contributed to that change.

The 100 page chartbook, priced at $5.50, is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or you may send your order to the BLS regional office nearest you.

Wage Surveys

for the Following Industries:

- **Life Insurance**
- **Communications**
- **Banking**
- **Iron and Steel Foundries**

Surveys include:

- Results from the latest BLS survey of wages and supplemental benefits.
- Detailed occupational data for the nation, regions, and selected areas (where available).
- Data useful for wage and salary administration, union contract negotiation, arbitration, and Government policy considerations.

Send your order to the BLS regional office nearest you.
